

Coin

Desktop finance/crypto tracker (Vite + Electron, Supabase backend).

npm Commands

Command	What it does
<code>npm install</code>	Install dependencies (once, or after pulling changes)
<code>npm run dev</code>	Vite dev server — opens in the browser , hot reload
<code>npm run electron:dev</code>	Launch the desktop app in dev mode
<code>npm run build</code>	Build web assets only (no installer)
<code>npm run electron:build</code>	Build web assets + package a Windows installer
<code>npm run migrate</code>	Run the database migration script

No `npm start` script — use `npm run dev` (browser) or `npm run electron:dev` (desktop) instead. See the full [npm cheat sheet](#) for how this compares to other projects.
